

Sustainable Development CHARTER

In time with business.

Sustainable Development is an essential element of our corporate culture and our business operations.

Our activities are underpinned by three pillars:

1

Committing ourselves to environmental protection – day in, day out

We are steadily reducing the CO₂ emissions of our vehicles and buildings
We are increasing the proportion of sustainable products in our materials procurement
We consume materials responsibly – and implement innovative recycling

2

Creating value – for our customers and partners

We support our customers in achieving their sustainability targets
We involve our partners and subcontractors in our SD activities

3

Accepting responsibility – as employers, too

We promote the health and safety of our workforce
We support the diversity and international character of our teams all around the world
We take an active part in regional initiatives
